

--15. (New) A method for ordering, in advance, from a host server, a selection to be played on at least one destination equipment, the method comprising:

displaying a menu on an apparatus, said menu containing a plurality of items including a selection to be played and specific requests, said specific requests including at least one of the selection to be played or the destination equipment on which the selection is to be played, wherein when selection is made in advance, the time and date at which the selection is to be played is chosen;

displaying the identity of the destination equipment on which the selection is to be played, and the selection;

displaying the date and time at which the selection is to be played on the destination equipment;

displaying an event for which the order of a selection is made in advance, and then displaying the selection of an event;

verifying receipt of a payment to authorize the recording of the specific requests on the destination equipment or on the server and the downloading on the destination equipment from the server of the specific requests.

16. (New) The method according to claim 15, further comprising choosing or saving a special message.

17. (New) The method according to claim 16, further comprising saving a personal message.

18. (New) The method according to claim 16, further comprising selecting a message from a plurality of messages.

19. (New) The method according to claim 15, wherein the destination equipment is capable of being connected to the Internet and to call the server.

20. (New) The method according to claim 19, wherein the steps of displaying are made by sending internet messages to a terminal in order to display selection steps necessary for making selections, the selection steps comprising messages sent from the terminal to the server as a function of actions performed by the user on the user's terminal to define the selection in advance.

21. (New) The method according to claim 17, further comprising recording the messages and requests on the host server together with an address of the destination equipment.

22. (New) The method according to claim 15, further comprising examining a special file containing recorded specific requests to determine if a current date and time on the equipment correspond to the date and time for execution of the advance request.

23. (New) A device for ordering, in advance, a selection to be played on at least one destination equipment, comprising:

means for displaying information on a screen for a user, said means guiding the user in making specific requests, said specific requests comprising choosing destination equipment on which said selection is to be played, choosing a time and date at which the selection is to be played, and choosing an event for which a selection is made;

means for recording the specific requests in a special file;

means for periodically examining the contents of the special file recorded on the destination equipment to trigger execution of the selection at a given time and date, or to trigger downloading of the specific request on the destination equipment.

24. (New) The device according to claim 23, further comprising means for remotely transmitting the specific requests to the destination equipment.

25. (New) The device according to claim 23, wherein the means for displaying comprises object modules added in *.DJO files called by a WIN.DEF configuration file on the equipment, when necessary.

26. (New) The device according to claim 23, wherein the special files are saved in a FILO.DJL module and program modifications necessary for operation and for use of this process will be downloaded in different modules.

27. (New) The device according to claim 23, further comprising means for defining rules for execution of a queue of songs of the specific requests, thereby modifying behavior of a disc-jockey according to at least one of: first file in is first out; at random; by selecting most popular songs first; by eliminating a second consecutive song by the same artist; any other rule; or by a combination of the foregoing.
